

## r27.6.2 Changelog

```
+-----+  
| r27.6.2 Release - 188006 |  
+-----+
```

Release day May 29th 2024

## Improvements

- DSOF-26045 API: session/status/health does not return statuses from solo mode machines

We have enabled the Designer APIs to return status information when the machine(s) that has been queried is running in solo mode.

- DSOF-26527 Update test cards with new logo

We have updated both the colour and test patterns included as part of the Designer installer and made available in both 16:9 and 4:3 versions. We have added the following:

- Full or limited colour test pattern
- Chroma subsampling test pattern to prove 4:2:2 or 4:2:0
- Updated Disguise branding

- DSOF-27199 API: session/gototag returns 200 even when tag isn't found

In previous releases, the session/gototag endpoint returned a 200 OK HTTP status code even if a transport tag was not found. This has been resolved by returning a 400 bad request status code instead.

## Fixes

- DSOF-26587 - Fixed an issue where video receive delay would drift during time in a Matrox server with OS24Q1 in r27.0
- DSOF-26898 - Fixed an m\_file->codec error when ingesting content
- DSOF-27051 - Fixed an issue where Matrox Videoin Hardware Identifiers got card-swapped
- DSOF-27124 - Fixed an issue where DSE mask could be not updated properly on Animate Objects
- DSOF-27139 "Adding machine media" console logging is now less verbose
- DSOF-27206 - Fixed an error where mesh deform gives out of bounds error when deformed mesh already exists
- DSOF-27219 - Fixed a crash to desktop on shutdown, if shutdown was triggered during startup
- DSOF-27225 - Autosave: Fixed an issue where only the current selected Transport Manager was considered when checking if we're currently in show
- DSOF-27226 - Fixed an issue where mesh deform applied maxDistance in local rather than global screen scale
- DSOF-27230 - Fixed an issue where the ProxyMaker did not unsubscribe removeResourceAction
