

r30.3.1 Changelog

```
+-----+  
| r30.3.1 Release - 207286 |  
+-----+
```

Release day: January 24th 2025

Improvement

- **DSOF-26577** - After searching for a Cue in the Cue List and selecting it the GUI focus is now moved from the search box to the Track widget to enable faster, more intuitive programming.

Fixes

- **DSOF-29173** - Various improvements to IP-VFC **Colour Format** behaviour:
 - Applying feeds on an IP-VFC will now attempt to apply the selected colour format and not force the output to RGB.
 - The feed outline will now correctly highlight in green when the colour format set in the GUI and the active output of the GPU match.
 - With the enableColourFormat option switch enabled Designer will no longer display a **Sub Sampling** option in the IP VFC GUI as it is now replaced with **Colour Format**.
 - Colour format options now specify in the GUI whether they are RGB or YCbCr to make it easier to select the correct format.
- **DSOF-26872** - Designer now correctly responds the POST `indirections/set` endpoint again. For information about our public APIs can be found [here](#).
- **DSOF-29207** - Designer will no longer occasionally product an Access Violation error when in OCIO mode and the input source to a layer changes from an Arrow source to a Texture.
- **DSOF-29309** - Actor machines are able to receive tracking data again.
